Claim 15 (Currently Amended): A multibeam scan apparatus comprising:

J.P.
4/1/04

a light source emitting light beams from respective light sources formed in a unitary structure and arranged in a main scanning direction, outgoing beam directions in which the light beams travel being arranged so as to cross each other at a point, ^{beams} and the light beam [^] forming images on having a same area of a scanned surface;

a deflection unit deflecting the light beams;

an optical unit causing the light beams from the deflection unit to form images on a scanned surface; and

~~an aperture~~ a light beam restricting mechanism situated close to said point and arranged to shape the light beams, ~~wherein said aperture is~~ and incorporated into deflection surfaces of said deflection unit to shape the light beams to have a given spot size before the light beams enter said optical unit that forms the images, the light beams incident to the deflection unit having a spot size that is larger than a size of each of the deflection surfaces.

EXAMINER'S AMENDMENT
